

OEL 357-65

15 March 1965

MEMORANDUM FOR : Assistant Director for ELINT

25X1C

SUBJECT : Request to OSI for Details on [REDACTED]  
Radars

25X1C 1. You have signed a memorandum to AD/OSI requesting information on whether or not leading edge tracking is employed in [REDACTED] radars. The consensus of opinion of [REDACTED] etc., is this capability is not known to exist but could exist in some radars which the Soviets may have. The primary function here is to simply have OSI on the record in the event the question comes up in the future.

25X1A

25X1A

2. [REDACTED] etc., have discussed the possibility of making such measurements which would give us an indication of the edge tracking. This appears to be a very complex job and is not proposed at this time.
